

Coloplast Product Guide

Katie
Ostomy Care User

Ostomy, Continence, Wound and Skin Care
Effective October, 2023

Katie
Ostomy Care User

Katie is 31 years old from England, living in Toronto since 2021. Katie was diagnosed with Acute Ulcerative Colitis and was told that she needed to have a Subtotal Colectomy and an Ileostomy surgery. She was introduced to Coloplast at Mount Sinai hospital in Toronto. She fell in love with the fit of SenSura® Mio ostomy bags. She is currently using the SenSura® Mio 2-piece Click system. Katie also uses the Brava® Adhesive Remover Spray, Brava® Protective Rings, and the Brava® Powder. She loves the Care team as they are always available on the other end of the phone. When Katie travels, the Care team is able to connect her to other Coloplast offices to help with any questions or concerns.

Ostomy

Is your patient getting the right fit?

A poor fit to the peristomal body profile is the main cause of leakage and skin complications.^{1,2}

BodyFit Technology® is an elastic adhesive technology unique to Sensura® Mio and is the foundation for achieving the right fit.

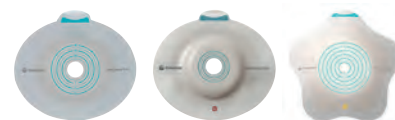

Secure body contact for protection

Flexible fit during movement

Wider-lumen outlet provides effective drainage for patients with thicker output; connects to Coloplast fistula drain bag #14010

Soft outlet provides effective drainage; connects to a standard drain bag or Coloplast fistula drain bag #14010

The SenSura® Mio range with BodyFit Technology®, makes it easier to provide an appliance with the right fit to body

The SenSura® Mio range with BodyFit Technology® makes it easier to provide an appliance with the right fit to body

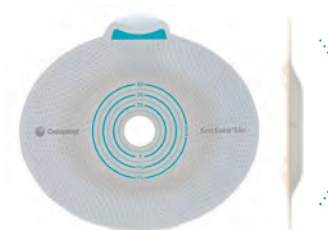

BodyFit Technology® is an elastic adhesive technology that is unique to SenSura® Mio. BodyFit Technology® provides secure body contact for protection and a flexible fit during movement.

SenSura® Mio

A flat SenSura® Mio adhesive will usually be adequate for a person with a stoma opening positioned above skin surface. In case of dips, creases and folds in the skin surface, a protective seal can be added to help create an even surface to ensure a secure seal.

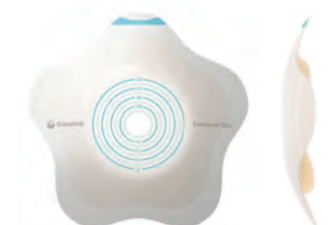

SenSura® Mio Convex

For a better fit to an inward peristomal body profile, consider a SenSura® Mio Convex solution:

- Convex Soft, for stomas above skin level that need support due to dips and creases.
- Convex Light, for slightly deep-seated areas, and for stomas with openings in level with the skin, to help the stoma protrude.
- Convex Deep, for when the stoma opening is in or below skin level to make the stoma protrude.

 Soft
  Light
  Deep

SenSura® Mio Concave

For people with an outward body profile, SenSura® Mio Concave with a curved fit can help obtain a secure seal without creases and folds in the adhesive.

Three more reasons why SenSura® Mio is a great choice for your patients

Discreet pouch colour

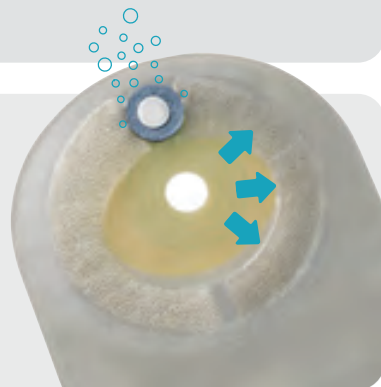

The all-textile material has a neutral colour designed to be discreet and unnoticeable, even under white clothing.

A filter you can trust

A unique, full-circle pre-filter provides greater protection against clogging.

Proven to reduce incidents of ballooning¹ by

61%

A choice of couplings

Click coupling has a lock ring designed for reassurance and a feeling of security. An audible 'click' confirms when the lock ring is securely locking the bag to the baseplate.

Flex coupling is flexible enough to adapt to body contours and comfortable during wear, with a very low profile.

SenSura® Mio is available in many different variants for people with colostomy, ileostomy and urostomy

1. Coloplast, Clinical Study, 2010 (VV-0009690) for people with ileostomy, compared to Standard of Care

SenSura[®] Mio Flex

Ostomy Barrier and Pouch - Two Piece System

Flex adhesive coupling allows flexibility and freedom of movement.

- Only Mio Flex Convex Flanges have 4 belt attachment points.
- Not made with natural rubber latex.

The Brava® range covers three distinct needs

Fit to body

- *Elastic Barrier Strips* provide extra security by helping prevent baseplate edges from lifting or rolling up.
- *Protective Ring, Protective Ring Convex, Paste & Strip Paste* fill in cavities/folds in the skin around the stoma, providing a better seal to the ostomy baseplate.
- *Belt* holds appliances tight to the skin and ensures that the baseplate stays in place.

Elastic Barrier Strips

Protect the skin

- *Skin Barrier Wipe & Spray* create a thin breathable film on the skin and reduce skin problems associated with body waste and adhesive
- *Adhesive Remover Spray & Wipe* provide a skin friendly way to remove appliances more easily.
- *Protective Ring, Protective Ring Convex, Powder & Protective Sheet* absorb moisture, helping reduce moisture-associated skin damage and irritation
- *Barrier Cream* creates a long lasting barrier effect that protects the skin against body fluids.

Skin Barrier

Adhesive Remover

Facilitate routine

- *Adhesive Remover Spray & Wipe* help facilitate easier removal of appliances.
- *Lubricating Deodorant's* multi-lubricating effect allows easier emptying of the bag and helps reduce odour when changing or emptying an appliance.

Continence

The truth is:

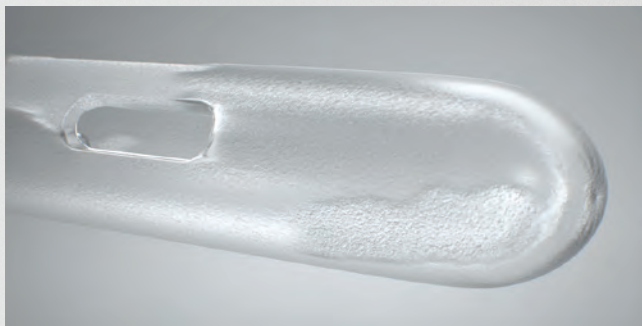

Not all coatings are the same

To protect the mucosa from risk of damage, complications,* and UTIs, try a coating that stays bonded, stays smooth and stays hydrated.

SpeediCath®

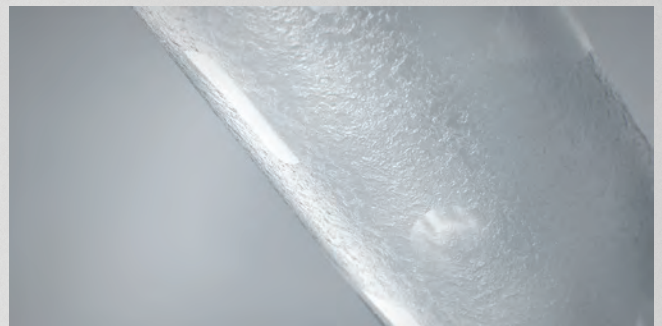

The coating plays an important role in protecting the urethra. But unfortunately, not all hydrophilic catheter coatings are the same. Some of the common pitfalls can be:

Dry spots

Some have dry spots where the coating doesn't adhere to the catheter during insertion or withdrawal.

Short dry-out time

Insufficient hydration may cause the coating to dry out over time and become rough or sticky.

All SpeediCath® catheters come with a unique hydrophilic coating, featuring our **Triple Action Coating Technology**. It consists of three strongly bonded elements, designed to protect the urethra in three ways:

Stays bonded

It stays bonded during insertion and withdrawal due to a proprietary base-coat that is covalently bonded to the catheter surface for an even coating without dry spots.

Stays smooth

It stays smooth because the polymer top-coat enables excellent water absorption for low friction, smooth insertion and reduced discomfort compared to uncoated catheters.

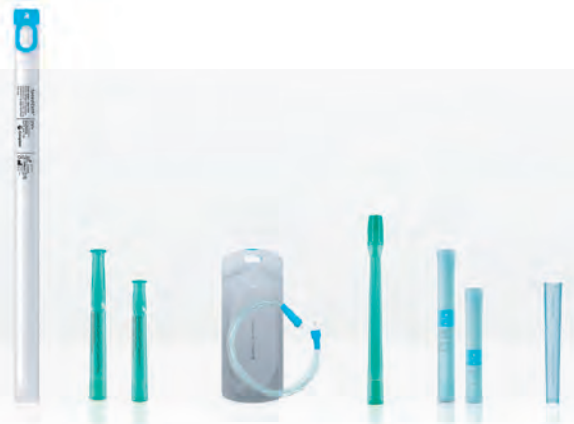

Stays hydrated

It stays hydrated with a special water-based solution that swells the coating and makes it instantly ready-to-use.

Scan this QR code for more details on our SpeediCath® portfolio.

SpeediCath®
with Triple Action Coating Technology
Stays bonded, stays smooth, and stays hydrated for protection of the urethra

Prior to use, refer to product labeling for complete product instructions for use, contraindications, warnings and precautions.

*Urethral bleeding (haematuria) and strictures

SpeediCath® is indicated for use by patients with urine retention and patients with post void residual volume (PVR) due to neurogenic and non-neurogenic voiding dysfunction. The catheter is inserted into the urethra to reach the bladder allowing urine to drain. SpeediCath catheters are available by prescription only. Patients performing self-catheterization should follow the advice of, and direct questions about use of the product to, their medical professional. Before using the device, carefully read the product labels and information accompanying the device including the instructions for use which contain additional safety information. The SpeediCath product is for single-use only; discard it after use. If you experience symptoms of a urinary tract infection, or are unable to pass the catheter into the bladder, contact your healthcare professional. The risk information provided here is not comprehensive. To learn more, talk to your healthcare provider. For further information, call Coloplast Canada Corp. at 1-866-293-6349 and/or consult the company website at www.coloplast.ca

SpeediCath® Flex

Hydrophilic Intermittent Catheter

A soft catheter for men with a dry-sleeve and a flexible tip with all the benefits of the SpeediCath® catheter. Offered with a loop system that fits into a discreet packaging which is 100% aluminum free. Latex, phthalate and PVC free. Sterile.

Self-Cath[®]

Designed for patients
comfort and ease of use.

Brianna
Winnipeg, MB

Features & Benefits

Material:

Self-Cath[®] catheters are made with a flexible *polyvinyl chloride (PVC)*.

Smooth and comfortable insertion:

Self-Cath[®] offers *fire polished eyelets* that allow the urethral mucosa to slide over the eyelets reducing the risk of being drawn into the lumen during insertion.

Easy guidance:

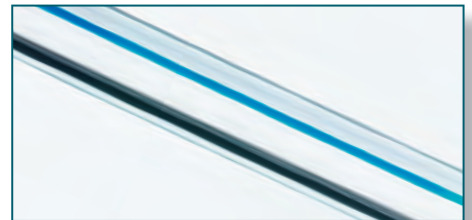

Self-Cath[®] Coudé catheters have a patented *Guide Stripe* which have a blue stripe indicating tip orientation. Therefore, patients can be sure of where the tip faces for the entire cathing experience.

Easy navigation:

Self-Cath[®] is available in *Straight tip*, *Tapered Tip* and *Olive Tip* option. Whichever your patients use, they may experience easier navigation through the curves and bends of their anatomy.

Self-Cath[®] catheters offer a range of options for many patient needs:

- Male straight and coude tip
- Female straight
- Pediatric (including 5 FR)
- Tapered coude and olive coude tips
- Available in a soft format and closed system

Tapered Tip

Olive Tip

* This product has the Pressure Injury Prevention indication.

Biatain[®] Silicone Non-Border

Designed for high absorption and retention under compression to minimise the risk of leakage and maceration of fragile periwound skin. Can also be cut to fit areas that are difficult to dress, e.g. on the heel or in between toes and fingers. For high absorption and retention under compression. 3DFit Technology minimizes risk of leakage and maceration.

Biatain®

Foam Dressing

Soft and conformable polyurethane foam dressing that effectively absorbs and retains wound exudate. This ensures a balance that is optimal for management of exuding wounds. Available in adhesive and non-adhesive. The adhesive has a hydrocolloid border – for a secure adhesion. This product is also used in high friction and shear areas such as the coccyx.

Brief Statements

Biatain® Family of Dressings

Biatain® dressings are single-use only. See the device manual for detailed information regarding complete instructions, contraindications, warnings, precautions and potential adverse events. For further questions, call Coloplast Canada Corporation at 1-888-880-8605 and/or consult the company website at www.coloplast.ca.

InterDry®

InterDry® is a skin protectant for the management of skin folds® and other skin-to-device contact areas. It reduces microbial colonization in the fabric. This single use fabric provides moisture transportation to keep skin dry while the antimicrobial in the fabric reduces odor. The safe use of InterDry fabric during pregnancy, lactation and on children has not been demonstrated. Although many patients benefit from the use of this device, results may vary. See the device labeling for detailed information including the indication, contraindications, warnings, precautions, and potential complications/adverse events. For further questions, call Coloplast Canada Corporation at 1-888-880-8605 and/or consult the company website at www.coloplast.ca.

Peristeen Plus®

The Peristeen Plus® Anal Irrigation System is intended to instill water into the colon through a rectal catheter, which incorporates an inflatable balloon, inserted into the rectum to promote evacuation of the contents of the lower colon. The Peristeen Plus® Anal Irrigation System is indicated for use by children (3 years - <12 years old), adolescent (12 years - < 18 years old), transitional adolescent (18 - <21 years old) and adult patients with neurogenic bowel dysfunction who suffer from fecal incontinence, chronic constipation, and/or time-consuming bowel management procedures.

Contraindications: Peristeen Plus® Anal Irrigation must not be used in the following situations: known obstruction of the large bowel due to strictures or tumors, acute inflammatory bowel disease, diverticulitis, complex diverticular disease, abdominal or anal surgery within the last 3 months, spinal shock phase, and in patients who are pregnant and have not used the system before (if the patient is pregnant and has never used anal irrigation before, they should not start the irrigation procedure during pregnancy).

Warning: Anal irrigation procedure should always be carried out with care. Bowel perforation is an extremely rare, but serious and potentially lethal complication to anal irrigation and will require immediate admission to a hospital, often requiring surgery.

See the device manual for detailed information regarding the procedure, contraindications, warnings, precautions, and potential complications/adverse events. For further information, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

SpeediCath®

SpeediCath® catheters are indicated for use by patients with chronic urine retention and patients with a post void residual volume (PVR) due to neurogenic and non-neurogenic voiding dysfunction. The catheter is inserted into the urethra to reach the bladder allowing urine to drain. There is a separate SpeediCath device intended for either males or females. This is a single-use only product. Patients are to contact their healthcare professional before performing self-catheterization for the first time and follow the instructions carefully. See the device manual for further information or, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

Self-Cath®

Self-Cath® Catheters are intended for use in male, female, and pediatric patients (neonates, infants, children, adolescents, and transitional adolescents) requiring bladder drainage as determined by their physician. The catheter is indicated for those individuals unable to promote a natural urine flow or for those individuals who have a significant volume of residual urine following a natural bladder-voiding episode. Single-use only. See the device manual for detailed information regarding the procedure, contraindications, warnings, precautions, and potential complications/adverse events. For further information, call Coloplast Canada Corporation at 1-866-293-6349 and/or consult the company website at www.coloplast.ca.

Triad™

Triad™ hydrophilic wound dressing is indicated for the local management of pressure and venous stasis ulcers, dermal lesions/injuries, superficial wounds, scrapes, first-and second-degree burns, partial-and full-thickness wounds. Suitable for use on neonates.

Contraindications: Triad™ is contraindicated for third degree burns or infected wounds. See device label for complete information including warnings and precautions. For further questions, call Coloplast Canada Corporation at 1-888-880-8605 and/or consult the company website at www.coloplast.ca.
